# Sampleability® Updates

Proactive Licensure Updates for Compliant Sampling with HCPs

Receive ongoing licensure updates for HCPs in your customer universe, to ensure compliant commercial operations and minimize risk.

Based on your configurable business rules, Sampleability Updates return an overall Yes/No value for sampling based on license status, expiration date, sanctions, professional designation, and last received date per Healthcare Professional (HCP) record.

1 - License Status

2 - Expiration Date

3 - License Sanctions

4 - Professional Designation

5 - Last Received Date

Configurable to Meet Your Business Rules

One size does not fit all for HCP & HCO information, only MedPro enables configurability to meet your business rules.

Powered by MedProID®

Access all key licensing and demographic data attributes needed for PDMA (Prescription Drug Marketing Act) compliance.

Sampleability Updates can be returned on a daily, weekly, monthly, or custom basis to fit your organization's needs. Values can be returned via File Transfer Protocol (FTP) or XML/JSON based web service API transfers to your CRM/MDM universe for integrated accessibility.

30+
million record healthcare license database

30+
years of experience supporting the Life Sciences Industry

Woah! We don't have to map the license statuses ourselves like we have to do now?! I'm so impressed with the data and the technology.
