

# Eligibility Updates™

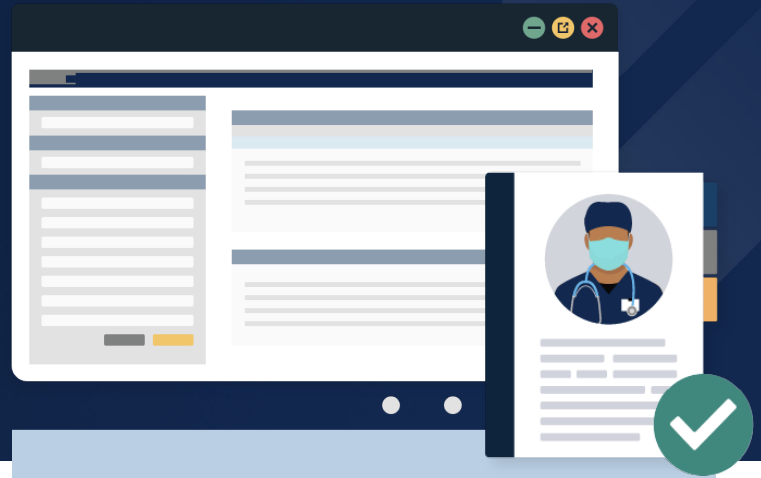

## Automated ATP Verification for Life Sciences Supply Chain Management

With Eligibility Updates™ from MedPro Systems, Life Sciences manufacturers can seamlessly automate ongoing license validation for every shipment they release through their supply chain.

Proactively verify Healthcare Professional (HCP) and Healthcare Organization (HCO) data attributes for all Authorized Trading Partners (ATPs).

Powered by MedProID, all data is acquired directly from authoritative Federal, State and Industry sources, and centralized for a trusted, easy-to-use single source of data governance. Seamlessly capture and verify all essential data attributes from ATPs required for Drug Supply Chain Security Act (DSCSA) compliance.

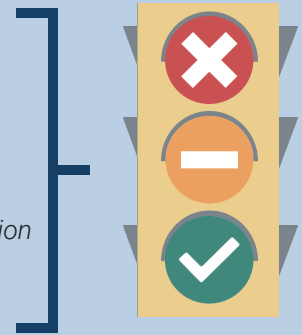

Say goodbye to shipping delays caused by manual lookups and outdated information, keeping your supply chain moving at the speed you do business.

### How Does Eligibility Updates Work?

Based on configurable business rules, Eligibility Updates will return an overall Yes/No value for shipment authorization based on license status, expiration date, sanctions, professional designation, and last received date per record.

- 1 - License Status
- 2 - Expiration Date
- 3 - License Sanctions
- 4 - Professional Designation
- 5 - Last Received Date

Eligibility Updates can be returned on a daily, weekly, monthly, or custom basis to fit your organization's needs. Data can be returned via FTP, or XML/JSON based web service API transfers to your CRM/MDM universe for integrated accessibility.
